User's Manual

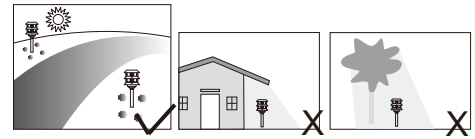
LOCATION OF THE SOLAR LAMP



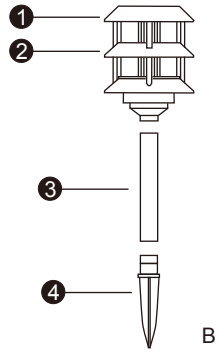
A

1) The solar lamp must be located in a position where it can get direct sunlight on the solar panel, and generally, free from cover and shade. (As shown in figure A).

2) Make sure that the photo sensor or solar panel (located on the top of the light) is not going to be affected by any other light source. Otherwise, the light may not illuminate at dusk.

3) The Solar lamp can be used immediately upon purchase by turning the switch to AUTO.

ASSEMBLY INSTRUCTIONS



B

Ground Mounting

1) Carefully remove the solar lamp and all the fittings from the box.

2) Begin assembly by threading the female end of the mounting pole ❸ into the male end on the bottom of the lamp unit ❷ .

3) Thread the male end of the stake ❹ into the female end of the mounting pole ❸ .

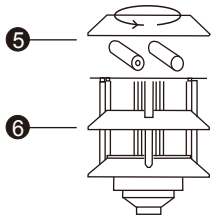
4) Carefully push the lamp into the ground using your hands. DO NOT use a hammer.

OPERATION

1) For daily/normal operation, move the switch to the AUTO position. The lamp will automatically turn ON during the night time.

2) The operating hours of the solar lamp during the night can vary from a few hours to throughout the night depending on the number of hours of sunlight received during the day.

REPLACING THE BATTERIES



For best results, replace the battery every 6-12 months.

1) Twist the lamp head ❺ anti-clockwise and you can see the batteries in ❺ .

2) Remove the old batteries, and replace them with 2 AA rechargeable alkaline batteries (not Ni-MH) in the correct positions.

3) Place the lamp unit ❺ on ❻ by twisting clockwise direction to fix the lamp head (step 1. in reverse).

TROUBLE SHOOTING

If your solar light does not turn ON at dusk, despite following to the above instructions, please check the following steps:

1) Make sure that other light sources are not shining on the lamp.
2) Ensure the solar lamp is not in the shade during the day.
3) Make sure the switch is in the 'AUTO' position.
4) Check that the batteries are installed correctly.

MAINTENANCE

Clean the solar panel regularly with a damp cloth to guarantee optimum performance of the solar panel. If any deposit on the solar panel, please clean it with alcohol liquid softly (do not use any other type of solvents) Otherwise, the solar panel performance will be affected. Please also be careful not to apply too much pressure on the panel while cleaning.

Important Notice To Users

The operating hours of the solar lamp during the night depends on the solar charge received during the day.

On a bright sunny day, the solar lamp may operate for more than 8 hours during the night, whereas on a cloudy day, it may operate for a few hours only.During winter, and especially when there is hardly any sunshine, the solar lamp may not operate at all.

We recommend that the battery in the solar lamp be taken out for charging electrically by the NiMH (not RAM) charger for use during winter. When the lamp is not being used for more than a month, remove the battery and store them separately.
